

1

ABSTRACT

2 A method and apparatus of logging events independently and separately
3 from other processes in a computer system are disclosed. A method for logging
4 events by cloning a log entry submitted by a consumer and releasing control of the
5 log entry to the consumer so that execution of an event may continue is disclosed.
6 A log manager that receives requests for writing event log entries to a log file while
7 enabling the execution of the event to continue independently is disclosed.
